

Aluminium Paste For a Brilliant Surface Appearance

Safety / Comfort

Application Areas

- Automotive industry (paints and coatings for finishes, interior and various exterior parts)
- Consumer electronics
- Industrial applications (coil coatings)
- Heat & corrosion resistant paints

Solution / Innovation for the Industry

- Contributes to a brilliant surface appearance of automotive parts

Aluminium Paste for a brilliant surface appearance

Asahi Kasei's Aluminium Paste is the material of choice for coatings, paints, printing inks, and many other applications, because of its high, uniform quality, superior functional characteristics, and variety of types, grades, and effects.

It provides a wide range of silver-metallic colour and design effects. The scale-armor effect of its flakeshaped particle layers provides excellent hiding properties and protects the substrate from penetration by gas, moisture, and UV light.

When used on exterior walls and roofs, the thermal and optical reflection characteristics of its flake-shaped particles facilitate interior climate control.

Key Features

- Broad selection of metallic pigments, which differentiate in brightness, sparkle, smoothness, flip-flop, hiding-power, water resistance, and chemical resistance
- Resin-coated grades for strengthening chemical resistance, electrical resistance, adhesion, and other properties
